

Security Portability

A Quiet Revolution in Mechanical Security is Taking Place!!

WHILE much of the attention of security professionals has been focused on the rapid development of electronic security products, a revolution has also been taking place quietly in the Mechanical Security Area. www.hideawaysafe.com.au

The Australian made and owned HIDE AWAY SAFE SYSTEM is very cleverly protecting Laptop Computers, CIT, Documents, Weapons and a host of other Sensitive Items both here and overseas and in ways no other single product can.

GLOBAL LEADER IN SECURITY PORTABILITY

“SECRETS, LAPTOPS VANISH”

Herald Sun, Saturday, April 3 2004 by John Masanauskas
The complete article is available from BreakingNews@hideawaysafe.com.au

The article states in the main that;

“SECRET defence data was on computers either lost or stolen from Federal Government agencies, a parliamentary committee has found. The committee’s report said nearly 1500 laptop computers had been lost from departments in five years.”

OUR COMMENT

This is a continuous trend that won't change until something drastic happens! "If we are to achieve results never before accomplished, we must expect to employ methods never before attempted" FRANCIS BACON
The HIDE AWAY SAFE SYSTEM is used successfully by almost every State and Federal Police force in Australia as well as by numerous Government and Semi Government Departments.

It is of interest to note that of the Government Departments mentioned in the article none to our knowledge are using our Relocatable Security System.

“LAPTOPS were most commonly stolen from Offices, Private Homes, Vehicles and Hotel Rooms”.

OUR COMMENT

The HIDE AWAY SAFE locks on and off its own Docking Station which can be purchased separately and easily installed in various secure locations as required, this includes private homes, vehicles and offices.

So for 24/7 security, a single HIDE AWAY SAFE with multiple strategically installed Docking Stations can protect your Laptop and other Sensitive items in all of these areas, including HOTEL / MOTEL ROOMS with the use of our NEW SHROUD & CABLE ASSEMBLY (see complete details at www.hideawaysafe.com.au)

The NEW SHROUD & CABLE ASSEMBLY is being used every day to protect sensitive items by certain Government Agencies in hotel / motel rooms - in loan vehicles, private vehicles or pool vehicles, within the vehicle proper or in the boot - at home overnight or on weekends away - visiting clients, at their office or during a lunch break - or if unavoidably left unattended for short periods in the car/boot.

Niche problem areas of weapon, data and laptop security are now well serviced with the availability of the Shroud & Cable Assembly to fit both model Hide Away Safes.

“THE Committee’s inquiry initially focused on the electronic protection of information held by federal agencies. But the report said it became clear that a Major Problem was the Security of Computer IT Assets.”

OUR COMMENT

At last it's become clear that a major problem exists with the security of IT / computer assets as opposed to data security only.

A HIGHLY SECURE, WELL MANAGED, RELOCATABLE, MOBILE MECHANICAL SECURITY SAFE SYSTEM such as the HIDE AWAY SAFE SYSTEM ensures that data encryption and other hi-tech CCTV and monitoring systems etc remain as back-up security systems, rather than being the front-line defence against Laptop data theft.

HIDEAWAY

ROI with the Hide Away Safe Concept.

When it is time to upgrade your vehicle fleet, the 'Hide Away Safe CarKit' is simply removed (leaving very little evidence of its installation) and in most cases simply relocated into the new vehicle with a minimum of disruption.

Duty of Care

Duty of Care must ultimately be handed down to the 'caretaker of these sensitive items / expensive equipment'. Eliminating and controlling the risk of theft must be borne first by the 'caretaker'. HOWEVER common sense would suggest a more successful result when appropriate mechanical security measures like the HIDE AWAY SAFE SYSTEM are put in place.

"Most enterprises today realize that over the last couple of years they had accumulated a number of IT assets with varying importance in their operations. Some have high value because they keep business going - they support B2B transactions, for example, or they coordinate operations on a manufacturing floor. Others have high value because of the type of data they hold, such as credit card information or financial data for a public company."

The Hide Away Safe System offers a unique ability to secure IT assets within a cost effective, lightweight - super strong Lexan Polycarbonate relocatable safe, which locks on and off its own Docking stations in multiple secure locations such as the workplace, the vehicle and at home. One Safe - three or more secure locations - "doesn't get any better than that!" The system is easily installed and when it's time to move on (new office or vehicle) the Hide Away Safe System moves with you. In Australia it is 'SCEC endorsed' for high security military and government use.

Our Companies sole mandate is the protection and security of the individuals precious possessions. Whether they be at home, in transit or at the office, and whether they be of a personal or business or of a public nature.
